

Incident Response

When to Use

A production service is degraded or unavailable.

Severity Levels

Level	Description	Response Time
SEV-1	Complete outage, all users affected	Immediate
SEV-2	Major feature broken, many users affected	< 30 minutes
SEV-3	Minor issue, workaround available	< 4 hours

Steps

1. **Acknowledge** — confirm the incident in the team channel.
2. **Assess** — determine severity and affected services.
3. **Communicate** — notify stakeholders based on severity.
4. **Investigate** — check logs, metrics, and recent deployments.
5. **Mitigate** — apply a fix or rollback.
6. **Verify** — confirm the service is healthy.
7. **Post-mortem** — schedule a blameless review within 48 hours.

Escalation

If the issue is not resolved within the expected response time, escalate to the engineering lead.

Useful Commands

```
1  # Check service health
2  curl http://localhost:7007/healthcheck
3
4  # View recent logs
5  docker logs <container-name> --tail 100
6
7  # Restart a service
8  docker restart <container-name>
```
